

2021/2022 SEMESTER 2

BTB 412

MASINDE MULIRO UNIVERSITY OF SCIENCE AND TECHNOLOGY (MMUST)

MAIN CAMPUS

UNIVERSITY MAIN EXAMINATIONS
2021/2022 ACADEMIC YEAR

FOURTH YEAR SECOND SEMESTER SUPPLEMETARY EXAMINATIONS

FOR THE DEGREE
OF
BACHELOR OF TECHNOLOGY IN BUILDING CONSTRUCTION

COURSE CODE: BTB 412

COURSE TITLE: STRUCTURAL DESIGN III

DATE: 6TH OCTOBER

TIME: 9- 11 A.M

INSTRUCTIONS:

1. Programmable calculators are not allowed in this exam
2. This paper contains **FOUR** questions
3. Attempt **QUESTION ONE** and any other **TWO** questions in SECTION B
4. BS (British Standards) Design Codes are permitted for this exam
5. Where information is deemed to be missing, make and state reasonable assumptions.

MMUST observes ZERO tolerance to examination cheating

This Paper Consists of 5 Printed Pages. Please Turn Over.

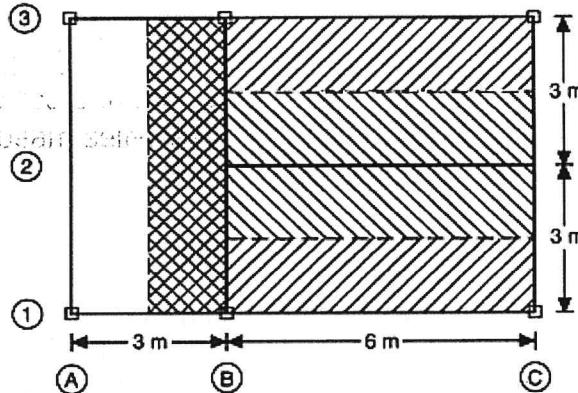

SECTION A- answers all question in this section.**Question one (40 marks) COMPULSORY**

- Several reinforced concrete buildings in Kenya have collapsed in the recent past. What are the main causes of building failure and how can they be mitigated. (10 marks)
- State and explain the significance of site investigations in building construction(10 marks)
- What are the pros and cons of using steel instead of concrete in construction of the upcoming structure? (10 marks)
- Discuss poor construction methods that result in structural failures in buildings. (10 mks)

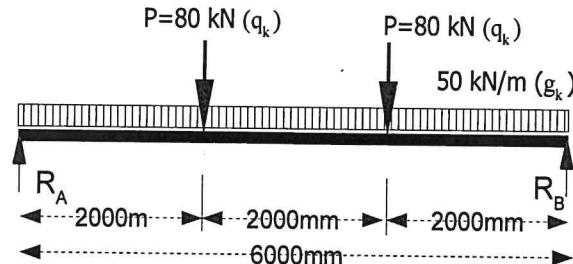

SECTION B**Question Two****(20 marks)**

The floor shown below with an overall depth of 225 mm is to be designed to carry an imposed load of 3 kN m^{-2} plus floor finishes and ceiling loads of 1 kN m^{-2} . Assuming that all columns are 3m and that the beam and column weights are 70 and 60 Kgm^{-1} run respectively, calculate the design loads acting on;

- beams B1-C1, B2-C2, B1-B3
- Columns B1 and C1

**Question Three****(20 marks)**

A simply supported beam of 6000mm span is carrying a uniformly distributed dead load of 50 kN/m (including the beam self-weight) and two point live loads of 80 kN at $1/3$ and $2/3$ of the span.

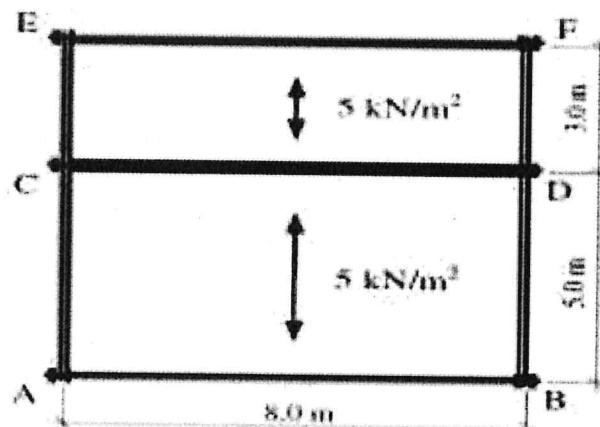

**Shear force table**

Distance (m)	0	2	2	4	4	6
Shear force (kN)	-338	-198	-70	70	198	338

- a.) Draw the Shear force diagram using the information given (2 marks)
- b.) Calculate the stirrup reinforcement size and spacing (10 marks)
- c.) Draw a sketch of the beam showing only the stirrup reinforcement spacing (4 marks)
- d.) Prepare bar bending schedule only for the links (4 marks)

Question Four**(20 marks)**

Examine the floor plan below and determine the total loads on all beams (10mks)

--- END ---

MEMORY AID

Bar Size (mm)	Cross sectional area of number of bars (mm²)											
	Number of Bars											
	1	2	3	4	5	6	7	8	9	10	11	12
6	28	57	85	113	141	170	198	226	254	283	311	339
8	50	101	151	201	251	302	352	402	452	503	553	603
10	79	157	236	314	393	471	550	628	707	785	864	942
12	113	226	339	452	565	679	792	905	1018	1131	1244	1357
